

Climate Change is a critical issue

The effects of climate change disproportionately afflict the urban poor and people of color  
They are more likely to live near highways and industries that pollute the air they breathe  
They have less access to fresh fruits and vegetables (food deserts)

What are some things The Grail can do to mitigate these problems?

What could we accomplish with \$65,000.00?

Start community gardens on empty lots in poor neighborhoods?

Start a Taking Root Campaign to plant trees in the inner city?

If we did not already own Cornwall, would we choose it to do this work?

Cornwall is not zoned for agriculture

The soil at Cornwall is not suitable for farming (rocky, uneven)

There is a large deer herd to that eats everything and carries Lyme disease

The women who live at Cornwall have all contracted Lyme disease at some time

Cornwall is not a convenient location for most of the folks in the region

It costs more than \$65,000.00 every year just to own the property. Is this our mission?

Cornwall was a gift to The Grail, we did not choose it. We did our best to make it fit.
